

LIVE DEMO

A brain dump to a fully design-reviewed Figma deck with super-AI agent swarm that returns instantaneous, unparalleled throughput to get you results

Cerebras-powered Gemma 4 inference:
an industry changing paradigm

OUTLINE

GEN

QA

02 THESIS: What is at stake?

**Low latency, parallel compute
change slide prep
from slow, lackluster output
to fast, ready-to-use asset**

Cerebras speed lets the system draft, critique, and repair while the user keeps judging the story.

Batch generation hides work

**Parallel, collaborative
agentic loops**

**Fast feedback loop
with human-in-the-loop**

03 CONTEXT CLASSIFICATION MAP

BATCH 16/16

10:40:30

Private context becomes categorized proof instead of a note dump.

SOURCE

**Cerebras Gemma 4 31B
low-latency calls plus per-agent timing in the UI.**

SOURCE

**Cerebras Gemma 4 31B
low-latency calls plus per-agent timing in the UI.**

low-latency calls plus per-agent timing in the UI.**

AGENT NOTE

Source proof

AGENT NOTE

Deck implication

AGENT NOTE

Caveat to preserve

Gbrain, Obsidian, brainstorm notes, and feedback memory are split into source buckets, claims, and caveats.

04 EVIDENCE WALL

The outline shows which proof belongs on which slide

Each evidence card is tied to a slide job so design decisions start from meaning, not a template.

05 AGENT WORKFLOW LOOP

The product is a loop: draft, evaluate, repair, then remember.

BEFORE

Draft outline

The first outline is not final; the swarm spends a visible eval window fixing the weak beats.

AFTER

Run format gates

06 BEFORE / AFTER CONTRAST

Escapes the identical-slide trap

5+ actions/sec
10-30 parallel agents

Variety starts in the text outline: each slide has a different information architecture and design directive.

Proof of Speed & Throughput

07 SPEED METRIC PROOF

Demo target is ten varied slides plus 5+ meaningful Figma actions/s

A meaningful action is a visible build, review, revise, polish, or finalize update on a slide.

08 SWARM SYSTEM MAP

The Gemma swarm works because each lane owns a different failure mode.

Narrative, coherence check catches weak arcs

Context + KB-based evidence catch unsupported claims

Visual reviewer catches sameness, design glitches

Critic catches demo risk

09 CRITIQUE / FIX PASS

BATCH 16/16 ready deck

The best part: self-fixing MULTIMODAL SYSTEM

Source Assets & Documented Context

EVAL AGENTS' NOTES

Visual Review + EVALS (pass/fail)

Fix

Acceptance criterion

Each gate checks one hard requirement, applies a concrete repair, and pass/fails based on visual review.

10 OPERATOR HANDOFF CLOSE

The finished artifact is a Figma deck the operator can inspect, edit, and ship.

The operator leaves with a real deck in the same Figma file; ready for inspection, edits, and shipment
